

Example research questions for final paper:

1. Using General Social Survey (GSS) data in the GSS 2021 folder, examine the relationship between respondent's highest degree and their reported hours worked in a typical week, controlling for age, race, and sex.
2. Using General Social Survey (GSS) data in the GSS 2021 folder, examine the relationship between respondent's income and their political views, controlling for age, race, and sex.
3. Using General Social Survey (GSS) data in the GSS 2021 folder, examine the relationship between respondent's highest degree and their reported confidence in the executive branch of government, controlling for age, race, and sex.
4. Using National Health Interview Survey (NHIS) data in the NHIS 2021 folder, examine the relationship between respondent's type of health insurance (i.e., private, public, uninsured) and how often they visit the doctor each year, controlling health status and family income.
5. Using American Time Use Survey (ATUS) data in the ATUS 2021 folder, examine the relationship between sex and time spent on housework, controlling for college degree status.
6. Using American Time Use Survey (ATUS) data in the ATUS 2021 folder, examine how the relationship between sex and time spent on housework varies by age of the youngest child in the household.

Note: Remember to look in the codebooks for the survey to see how variables are coded, how the questions are phrased, etc.
